

Lung Cancer Segmentation

Deep Neural Networks Final Project

Salem AlAthari, Zehui Chen, Kat Desai, Manjit Singh

April 18, 2024

Research Question

Can we use deep learning to identify lung cancer in CT scan images?

The Dataset

- Fusion of Kazakh Research Institute of Oncology & Radiology and LIDC-IDRI dataset
- 972 CT images labeled by radiologists using the Lung-RADS System
- Each image is labeled with a mask overlaying the cancer

*Nam, Diana; Panina, Alexandra; Pak, Alexandr (2024),

Dataset

Literature Review - Key Points

- Most research in the current field is done using pre-trained models and using transfer learning to get it to work with another dataset.
- Models used for segmentation stem from the UNET architecture (E.G. MobileNetV2).
- More modern research focuses on segmenting multiple CT scans for a 3D segmentation.

Tentative Development Schedule

Apr 11-18.....Dataset sourcing and literature review

Apr 18-25.....Finetune a pretrained model with this dataset

Apr 25-May 2.....Develop CNN baseline model from scratch

May 2-9.....Performance enhancement

May 9-16.....Presentation & Paper
